

NORTHERN REFUELING MAINTENANCE PTY. LTD.

AIR BP – BROKEN HILL AIRPORT New Fuel Depot Installation

NRM Customer: Air BP
Project Value: \$400,000
Period of Project: May 2009 to June 2009

Description of Project:

In March 2009, Northern Refueling Maintenance were awarded the contract for the mechanical and civil works associated with the upgrade of the Fuel Depot at Broken Hill Airport, Broken Hill NSW.

Major works included in NRM's scope were:

- Perform all civil works including tank footings, all slab work, refueller parking bay, refueller area asphaltting, miscellaneous slabs, effluent drainage pits and pipe trenches.
- Temporary re-location of Jet-A1 55kL self bunded storage tank and reinstallation into permanent location following construction of footings.
- Unloading and Installation of Avgas 55kL self bunded storage tank.
- Fabrication and installation of interconnecting pipework between Bridger receipt and pump skids.
- Installation of Avgas Cardswipe Skid and Shelter.
- Extension to site security fencing and erection of site equipment shed.
- Commissioning of mechanical installations.

Whilst encountering bad weather (high winds and low temperatures) through the course of the installation works and factoring in the isolated location of the township, the project was completed on schedule and to the satisfaction of the customer.
