

NORTHERN REFUELING MAINTENANCE PTY. LTD.

BP AUSTRALIA – DARWIN AIRPORT Hydrant Line Extension

Customer: Darwin International Airport
NRM Customer: BP Australia Pty Ltd
Project Value: \$500,000
Period of Project: April 2009 to October 2009

Description of Project:

Following successful implementation of the hydrant line extension works at Cairns Airport, Northern Refueling Maintenance were invited to tender for the mechanical works associated with the western hydrant line extension of the JAFS (Joint Aviation Fuelling System) for Darwin International Airport. NRM were successful in our bid for this project.

Major works included in NRM's scope were:

- Installation of approximately 150 meters of 200NB pipe.
- Installation of new valves.
- Construction and installation of new valve pit.
- Flushing and hydrostatic testing of new extension.

The project was completed within the scheduled timeframe set by BP Australia and the works completed to their satisfaction and that of JAFS Darwin. The successful completion of this project places the company in a position to show potential clients that NRM have the skills and resources to conduct this type of works regardless of the location.
